

PREVENTİN

WOOD ANTIBACTERIAL WOOD PROTECTOR

FOR IMPRESSION OF ALL TYPES OF WOOD

Areas of Use

✓ WOOD

✓ WOODEN ITEMS

WHAT IS THE PREVENTİN?

izogin Preventin, is a water-based antibacterial impregnated wood preservative product against fungal, insect and worm damage to wood.

WHY PREVENTİN?

Preventin is a water-based antibacterial ready-to-use pesticide. When applied to the bare wood surface, it penetrates between 1 mm and 2 mm depending on the type of wood (hard wood, soft wood), cleans the wood sap from bacteria and prevents the formation of bacteria. Since it is antibacterial, it prevents worms and insects that feed on wood juice from destroying the wood. It dries in 24 hours under normal weather conditions (+8°C). It is colorless and does not spoil the natural properties of the wood.

Prevent is a superior impregnation product due to its easy use and features.

CONSUMPTION: According to wood type and type
25 ~ 80 gr / m²

ANTIBACTERIAL IMPREGNATION

It can act as an impregnation in wood against fungi, bacteria and all kinds of harmful insects.

INCREASES THE STRENGTH OF WOOD

It increases the resistance of wood against natural conditions.

PRESERVES THE NATURAL FEATURES OF WOOD

It is colorless. However, it does not disrupt the natural properties of the wood or change its color in any way.

BREATHES WELL

Since it is water-based, it is breathable. This ensures that the wood extends its life and maintains its durability, especially on wooden surfaces.

DOES NOT REQUIRE MASTERY

It is produced so that everyone can easily apply it themselves. The person applying it does not need to be familiar with the subject or have any expertise. It can be used by direct immersion method or by putting it in the machine in the industry. There is no need to add any additional water.
