WATER BASED WOOD VARNISH

Wood protective and nourishing varnish

Areas of Use

✓ **EXTERIOR**

✓ **INTERIOR**

WHAT IS WATER BASED VARNISH?

It is a multi-purpose, fast air-drying, water-based acrylic-alkyd based silk matte varnish. It is odorless because it is water-based and solvent-free.

- Breathing Feature
- Vapor Permeability
- Dielectric Property
- Anti Bacterial
- Diffusion Feature
- Can be used on interior / exterior surfaces.
- Excellent adhesion property
- Very good movie creation feature
- Penetration feature
- Low VOC

TECHNICAL SPECIFICATIONS

It adheres perfectly to the surface. : Izogin water-based varnish was subjected to UV resistance test in TÜRKAK accredited test laboratory and it was documented that no blistering, flaking or cracking occurred as a result of the test. Since it is water-based, it penetrates deeply into the wood surface and provides surface protection. Since it is water-based, it prevents fungus and rotting by allowing the wood to breathe. It is not affected by ricochet.

It can be washed with water. It can be deleted. It is resistant to impacts and is strong enough not to penetrate wood. Since it is water-based, it does not emit any harmful odors in closed environments.

THE MOST PRACTICAL WATER BASED VARNISH

Since it is water-based compared to other solvent-based varnish products, it especially extends the life of wood. Protects against external factors.

DOES NOT REQUIRE MASTERY

It is produced so that everyone can easily apply it themselves. The person applying it does not need to be familiar with the subject or have any expertise. It can be easily applied by applying directly to the surface with a brush or roller.

Consumption: Depending on the wood type (hardness and softness), the primer coat is 100 gr/m² to 120 gr./m², the second coat is 80 to 100 gr./m².
